

Novo Whole Genome Sequencing (WGS)

Whole Genome Sequencing through Novogenomics is a comprehensive test that covers up to %98 of the whole human genome.

Novo Whole Genome Sequencing (WGS) is comprehensive genetic testing which assesses the vast majority of the human genome and is a powerful tool for detecting known and potential disease-causing variations. WGS is a comprehensive single test that detects a broad range of variants that may not be identified on more targeted genetic testing

Why Novogenomics

In-house analysis	Accurate Results	Options of Genetic Counselling	Clinical Support 24 x 7
Comprehensive coverage	Faster TAT (Turn- Around-Time)	CAP & CBAHI accredited	Bioinformatics Pipelines
